About cyan:

cyan is a European based, globally active provider of intelligent cyber security solutions and platforms (BSS/OSS) for telecom companies, with more than 15 years of experience in the IT industry. The company's main business areas are IT security solutions for end customers of mobile and fixed network internet providers (MNO, ISP), mobile virtual network operators (MVNO) and financial service providers. The solutions provided by cyan are integrated as white label product into the infrastructure of the business partners, who then offer them to their end customers, in a B2B2C model, under their own brand.

In its security segment the company is offering a variety of different solutions such as [Child Protection](#), [OnNet Protection](#) or [OnDevice Protection](#).

The solutions are driven by cyan's Seamless Security approach and Threat Intelligence Technology. The company combines human and machine-driven research methods to detect and resolve cyber-threats targeting their customers. Their virtual machines are distributed in data centers all over the world, running content analysis 24/7 and providing output to cyan's threat database, which is updated in frequent cycles and designed to feed new threat findings directly into the engines of partners.

Today the group has numerous international customers, through which cyan's products are distributed to end users worldwide. Besides Orange, cyan's customers include, among others, Claro Chile (América Móvil Group), dtac (Telenor Group) as well as the telecom group Magenta (T-Mobile).
